Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) Wicher Bergsma, Marcel A. Croon, Jacques A. Hagenaars

Marginal Models for Dependent, Clustered, and Longitudinal Categorical Data provides a comprehensive overview of the basic principles of marginal modeling and offers a wide range of possible applications. Marginal models are often the best choice for answering important research questions when dependent observations are involved, as the many real world examples in this book show.

In the social, behavioral, educational, economic, and biomedical sciences, data are often collected in ways that introduce dependencies in the observations to be compared. For example, the same respondents are interviewed at several occasions, several members of networks or groups are interviewed within the same survey, or, within families, both children and parents are investigated. Statistical methods that take the dependencies in the data into account must then be used, e.g., when observations at time one and time two are compared in longitudinal studies. At present, researchers almost automatically turn to multi-level models or to GEE estimation to deal with these dependencies. Despite the enormous potential and applicability of these recent developments, they require restrictive assumptions on the nature of the dependencies in the data. The marginal models of this book provide another way of dealing with these dependencies, without the need for such assumptions, and can be used to answer research questions directly at the intended marginal level. The maximum likelihood method, with its attractive statistical properties, is used for fitting the models.

This book has mainly been written with applied researchers in mind. It includes many real world examples, explains the types of research questions for which marginal modeling is useful, and provides a detailed description of how to apply marginal models for a great diversity of research questions. All these examples are presented on the book's website (www.cmm.st), along with user friendly programs.

From reader reviews:

Tony You:

The guide untitled Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) is the e-book that recommended to you to read. You can see the quality of the e-book content that will be shown to anyone. The language that author use to explained their way of doing something is easily to understand. The author was did a lot of study when write the book, therefore the information that they share to you personally is absolutely accurate. You also might get the e-book of Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) from the publisher to make you a lot more enjoy free time.

Jose Scott:

Why? Because this Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) is an unordinary book that the inside of the publication waiting for you to snap the idea but latter it will jolt you with the secret the item inside. Reading this book alongside it was fantastic author who else write the book in such awesome way makes the content interior easier to understand, entertaining method but still convey the meaning thoroughly. So , it is good for you for not hesitating having this ever again or you going to regret it. This amazing book will give you a lot of gains than the other book possess such as help improving your ability and your critical thinking approach. So , still want to postpone having that book? If I ended up you I will go to the reserve store hurriedly.

Christopher Hill:

Your reading sixth sense will not betray you actually, why because this Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) e-book written by well-known writer we are excited for well how to make book that may be understand by anyone who all read the book. Written in good manner for you, still dripping wet every ideas and publishing skill only for eliminate your own personal hunger then you still uncertainty Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) as good book not merely by the cover but also by content. This is one book that can break don't assess book by its cover, so do you still needing an additional sixth sense to pick this!?! Oh come on your examining sixth sense already alerted you so why you have to listening to one more sixth sense.

Steven Miller:

You are able to spend your free time to learn this book this guide. This Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) is simple to develop you can read it in the area, in the beach, train along with soon. If you did not have got much space to bring typically the printed book, you can buy often the e-book. It is make you much easier to read it. You can

save often the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.
