Markets, Politics and the Environment: An Introduction to Planning Theory Barry Goodchild

Markets, Politics and the Environment answers three groups of question:

- What is planning?’ and as part of this ‘What are its key features as a style of social practice and action?’ and ‘How does planning as a style of social practice relate to social and economic change?’
- How, as part of the justification for planning, might claims of valid technical knowledge be constructed? What is meant by ‘rational’? What is the contribution of pragmatism as a supplement or replacement to rationalism? How might rationality and pragmatism be adapted to postmodernism and the requirements of diversity?
- Finally, how may concepts of planning be reoriented towards sustainable development as a collective duty? How might sustainable development be reworked in relation to planning as a means of managing and stimulating change?

Each group of question is discussed in a separate chapter and is associated with different theories, debates and examples of practice. *Markets, Politics and the Environment* concludes that the full implications of sustainable development and climate change point in the direction of a different type of state- a green state whose future functioning can draw on planning theory but at present can only be conceived as a sketchy outline.
