A Matter of Wonder: What Biology Reveals about Us, Our World, and Our Dreams Translated by A. Shields G. Schatz

A Karger 'Publishing Highlights 1890–2015' title

Where do we come from? Is our destiny determined by the genes we inherit? Do we all see the same blue color when we look at the sky? In this book Gottfried (Jeff) Schatz, the world-renowned biochemist and co-discoverer of mitochondrial DNA, gives lucid - albeit often surprising - answers to universal questions and takes the reader on a fascinating journey of discovery across the boundaries of scientific disciplines. With passion and a keen sense of wonder, he draws on philosophy, cultural history and art to formulate his reflections on the mystery of life. The key to understanding life is to be found in its chemistry, and he proves that this is no dry endeavor and certainly not devoid of beauty. The result is a collection of eloquently and poetically written essays dealing with key issues in the natural sciences. It will appeal not only to scientists, but to all curious minds, regardless of educational and professional background.
