Bounding Biomedicine: Evidence and Rhetoric in the New Science of Alternative Medicine Colleen Derkatch

During the 1990s, an unprecedented number of Americans turned to complementary and alternative medicine (CAM), an umbrella term encompassing chiropractic, energy healing, herbal medicine, homeopathy, meditation, naturopathy, and traditional Chinese medicine. By 1997, nearly half the US population was seeking CAM, spending at least \$27 billion out of pocket.

Bounding Biomedicine centers on this boundary-changing era, looking at how consumer demand shook the health care hierarchy. Drawing on scholarship in rhetoric and science and technology studies, the book examines how the medical profession scrambled to maintain its position of privilege and prestige, even as its foothold appeared to be crumbling. Colleen Derkatch analyzes CAM-themed medical journals and related discourse to illustrate how members of the medical establishment applied Western standards of evaluation and peer review to test health practices that did not fit easily (or at all) within standard frameworks of medical research. And she shows that, despite many practitioners' efforts to eliminate the boundaries between "regular" and "alternative," this research on CAM and the forms of communication that surrounded it ultimately ended up creating an even greater division between what counts as safe, effective health care and what does not.

At a time when debates over treatment choices have flared up again, *Bounding Biomedicine* gives us a possible blueprint for understanding how the medical establishment will react to this new era of therapeutic change.
